

Hydrolat Toners

[Click here to return to the store](#)

These are organic hydrolat flower waters, available in Chamomile, Orange Blossom or Rose fragrances. They are a lovely natural alternative to manufactured skin toners which often contain harsh ingredients and alcohol. These are produced during the steam distillation of essential oils, so contain the dissolved plant extracts which are kind and soothing to the skin. Presented in a violet glass bottle with a spray attachment, without any preservative, they may be lightly spritzed onto the facial skin to refresh and cleanse. We'd suggest these are used after our cream cleansers, as part of your daily skincare

regime.
